India-Uk talks on clean energy transition in power sector

AAT News Service

India and the UK have set in motion plans for driving the clean energy transition in power sector.

Despite Covid-19 disruptions, especially due to the second wave of pandemic witnessed during the last quarter of the current fiscal, India achieved a significant increase in renewable energy (RE) and improved its RE growth to 6.3 per cent in the first quarter of FY 2021-22 (April-June) in comparison to the corresponding period of FY 2020-21. The huge jump in exports of agricultural and processed food products during the first three months of current fiscal is a commendable growth in international sales of exports witnessed in FY 2020-21. According to WTO's trade map, the total agri-exports of $37 billion in 2018, India is ranked 15th among 100 countries in the world. This initiative taken by Agri-cultural and Processed Food Products Export Development Authority (AEDPA) under the Ministry of Commerce, has helped the country achieve the milestone at a time when the outbreak of pandemic was at its peak. According to the Quick Estimates released by the Central Bureau of Economic Intelligence and Statistics, the overall export of AEDPA products has witnessed 44.3 per cent growth in dollar terms during April-June 2021 over the same period of the previous year. The overall export of AEDPA products increased from $3,309.5 million in April-June 2020 to $4,787.5 million in April-June 2021.

The rise in export of agricultural and processed food products is the outcome of AEDPA's initiatives taken for the export promotion of agricultural and processed food products, such as organizing EXIM exhibitions in different countries, exploring new potential markets through marketing campaigns by active involvement of Indian embassies. AEDPA has also taken several initiatives to promote Indian products at international events and trade fairs, ensuring Indian presence in international markets. They are also providing financial assistance to Indian exporters to enter new markets and diversify their export base. The government has also been actively engaging with foreign buyers and traders to promote Indian products in the global market. India is a major exporter of agricultural and processed food products and has been consistently improving its export performance. The country is a leading exporter of tea, coffee, spices, and herbs, and has also been making significant strides in the export of processed food products. AEDPA has been working closely with the Ministry of Commerce and Industry to improve the export performance of agricultural and processed food products. The government has also been providing various incentives and support to Indian exporters to help them boost their exports to the global market.
